AIMS AND SCOPE

Neuropharmacology publishes papers concerned with original studies of the actions of drugs and biologically active substances on the central and peripheral nervous systems in animals and man.

The principle aim of the Journal is to further our understanding of the mechanisms of action of drugs on the nervous system as well as to facilitate communications between the different scientific disciplines, and between the basic sciences and clinical investigation.

Neuropharmacology is an interdisciplinary subject and the Journal welcomes papers on all aspects of the subject.

Manuscripts may be submitted as (a) full length papers or (b) Preliminary Notes which should need the minimum of editing in order to facilitate rapid publication (see below). Review articles, announcements and special supplements, dealing with symposia or international conferences of special interest to neuropharmacology, may also be published from time to time.

Papers will normally be published within 6 months of acceptance.

INSTRUCTIONS TO AUTHORS

Neither the Editors or the Publishers accept any responsibility for the views or statements expressed by authors in full length papers or Preliminary Notes.

This Journal should be cited in reference lists as *Neuropharmacology*.

MANUSCRIPTS

All manuscripts submitted for publication and all scientific correspondence, as well as news and general information should be sent to one of the Chief Editors whose addresses are listed on the inside front cover. Authors in Europe, Middle East, Africa and Australasia should send their papers to P. B. BRADLEY and authors in North and South America, India and Far East to E. COSTA.

Manuscripts should be typed, double spaced on one side of paper not larger than A4 (206 × 294 mm) and submitted in duplicate (one copy must be the top copy, or original). Manuscripts produced on dot matrix printers are not acceptable. There should be a separate title page with the names of the authors and their addresses.

Style. Papers must be submitted in the style of the Journal (see any recent issue) and in accordance with the Instructions to Authors. Failure to follow these instructions may result either in delay in publication or the return of the manuscript for revision **even if it is acceptable scientifically.**

Nomenclature. In view of the interdisciplinary nature of the Journal and to avoid misunderstanding, contributors should define the context in which words such as *adapt*, *stress*, etc. are used. Terms peculiar to a particular discipline should be avoided. The generic or chemical name of drugs must be used. Trade or registered names may be referred to once.

Abbreviations should be avoided as far as possible. Only well-known abbreviations of **pharmacological** terms, such as ACh, DA etc., may be used. Abbreviations from other disciplines, i.e. anatomy or psychology should not be used and new or unfamiliar abbreviations should not be introduced. The only exception is for compounds with long or complicated chemical names, in which case the manufacturer's code number or a suitable abbreviation may be used **provided the full chemical name is given initially.**

Summary. A summary (not exceeding 200 words) should be submitted on a separate sheet in duplicate.

Short title. A short (running) title of not more than 40 characters should be provided.

Key words (not more than 6) must be provided for indexing purposes.

References should be collected in alphabetical order at the end of the paper. They should include the authors' names, year of publication (in parentheses), title of article, title of journal (abbreviated according to the 4th edn of the *World List of Scientific Periodicals*), volume number and first and last page numbers.

e.g. Holzbauer M. and Vogt M. (1959) Depression by reserpine of the noradrenaline concentration in hypothalamus of cat. *J. Neurochem.* **1:** 8–12.

References to books should, in addition, include the names of the editors, the edition number (where appropriate), the publisher and place of publication.

e.g. Abood L. G. (1968) The psychotomimetric glycolate esters. In: *Drugs Affecting the Central Nervous System* (Burger A., Ed.), Vol. 2, pp. 127–167. Dekker, New York.

Papers "In press" may be cited but *not* those "Submitted" or "In preparation". These should be referred to in the text as "Unpublished".

All the names of the authors must be given the first time a reference is cited in the text of the paper. Thereafter *et al.* may be used for three or more authors.

Illustrations should be kept to a minimum. They should be submitted (in duplicate) either as original drawings or tracings, or as high quality photographic prints, not less than 180 × 125 mm in size, and unmounted. Illustrations with white traces on a black background should be avoided. The **second** copy of each illustration may be a photocopy provided it is sufficiently clear. Each illustration should be accompanied by a legend typed on a separate sheet.

Tables should be intelligible without reference to the text. However, the same information should not be reproduced in both tables and figures.

Proofs. Two sets of page proofs will be supplied, one of which may be retained by the authors. They will normally be sent to the first author and corrected proofs should be returned to Professor P. B. Bradley within 3 days of receipt.

Reprints can be supplied at a reasonable price if ordered on the form sent out with the proofs.

PRELIMINARY NOTES

These should be not more than 1000 words in length and contain not more than 2 figures, 1 table and 10 references. They should have a Summary not exceeding 100 words. As they are printed from camera-ready copy, Preliminary Notes should be typed single-spaced onto special lay sheets (which can be obtained from the Chief Editors) or on high quality A4 paper.
